Heap ⟹ Longer in Size ⟶ GyB
➡ DMA [malloc, calloc, realloc]
Allocation/Deallocation of memory ⟹
                                        Programmer.

1. until manually freed -> lifetime allocation of
memory will be there

2. access speed is slower than stack

3. larger size
